

Ascom A51

Heavyweight protection in a lightweight package

A rugged, smart and easy-to-use alarm transmitter designed for workplaces where a high level of security is required, the Ascom a51™ is your protector in times of need. Not only does this lightweight pocket-sized transmitter allow you to send alarms manually, it will also transmit an alarm automatically if for some reason you can't.

Fast facts

- Pull-cord triggers an alarm if the pager is forcibly removed from user
- Two buttons for configurable alarms
- Small, light, with easy-to-access buttons on front

Two alarm buttons

There are two alarm buttons, one for soft alarms and one for emergencies. Each button can be programmed for a variety of responses, ensuring that the right alarm is transmitted to the right people – without confusion. And because the buttons are placed on the front, you'll have no trouble finding them. In addition to cutting life-time costs, a built-in antenna not only prevents objects from getting caught on the aerial, but also reduces risk of breakage.

Extra safe

For extra safety, there's a pull-cord that activates the emergency alarm when detached from the transmitter, for example if it's forcibly taken from a person. The automatic man-down alarm is activated depending on the position and angle of the transmitter over a predefined period of time. The no-movement alarm is sent if there's no sign of life from the user within a predefined time.

To avoid false alarms, a warning tone sounds before automatic alarms are transmitted. This function is available in all versions and allows the user to cancel the alarm if necessary.

Keeping track of the user

To ensure rapid assistance, the Ascom a51 features an optional location function. As soon as an alarm is sent, locator codes and other vital information are transmitted. That way, the current position of the person carrying the transmitter can be estimated with pinpoint accuracy.

Smart design

The Ascom a51 offers a range of smart features for maximum user-friendliness, including rechargeable batteries to save time and ID labels for easy identification. The latter is especially important since every pager has its own SIM-card. After all, if you're carrying your colleague's transmitter, you're also carrying their personal settings. Furthermore, the Ascom a51 is available in two colours to distinguish different usages.
